

This upgrade applies to the Low Profile Front End for the ATOM and ATOM CC.

It performs these key functions;

- 1.5mm extra clearance to the wheel to allow super easy ride height changes by removing only 4 screws.
- Slotted design provides a 0.5° - 2.5° camber adjustment window. Set camber with central adjustment nut and then fix by tightening the 4 top screws to prevent any dynamic camber change and ensure BRCA legality.
- Simple setup of 0.5° camber by attaching the new strap and removing the central nut.
